

Web Site Construction

Lab 7

The *float* Property

Fall 2019
Due: October 23

In this assignment you will create a layout using the float property. The final result should look like the provided image (*Lab07.jpg*). Here is the recommended order for what you need to do:

1. Download *Lab07.html* from EduCat.
2. Use the *width* and *height* properties to give every element an appropriate size. Use pixels for heights and percentage for widths.
3. Float the elements as needed.
4. Use *margin* to separate different sections. Use pixels for *margin-bottom* and *margin-top* and percentage for *margin-left* and *margin-right*.

Put your name on the top of the HTML file and upload it to EduCat.
